

Dwellings and Housing Conditions

2014, overview

More than one-half of persons aged 20 to 29 lived in a rented dwelling in 2014

According to Statistics Finland, 55 per cent of all persons aged 20 to 29, or 363,000, were living independently¹⁾ in a rented dwelling in 2014. The share of those living in rented dwellings among persons aged 20 to 29 has increased by four percentage points between 2005 and 2014. The share of owner-occupiers has fallen slightly over the same period. Seventeen per cent (113,000 persons) of the age group were living with their parents. Among all persons aged 20 to 29, a total of 83 per cent were living independently, that is, 550,000 persons.

Share of persons living independently in an owner-occupied dwelling in the age group by age and by area in 2005 and 2014, %

In Greater Helsinki, 65 per cent of those aged 20 to 29 were living independently in a rented dwelling in 2014. The share of those living in rented dwellings grew by four percentage points in the period of 2005 to 2014 and the share of those living in owner-occupied dwellings fell by four percentage points. The fall in the share of those living in owner-occupied dwellings in Greater Helsinki is explained, besides rental dwelling becoming more common, by a larger share of persons aged 20 to 29 than before living with their parents.

1) A person living independently refers to a person not living with his or her parents.

In Greater Helsinki, 15 per cent of persons aged 20 to 29 were living with their parents in 2014. The share has increased by two percentage points from 2005. Outside Greater Helsinki, 18 per cent of persons aged 20 to 29 were living with their parents in 2014. The share has fallen by four percentage points from 2005, but it is still higher than in Greater Helsinki.

In 2014, nearly one-third of all household-dwelling units, that is, 824,000 household-dwelling units were living in rented dwellings. A total of 1,340,000 persons belong to renting household-dwelling units. Among occupied rented dwellings, 335,000 (41%) were interest-subsidised rented dwellings and 584,000 persons lived there. A total of 1,699,000 household-dwelling units were living in dwellings or houses owned by them, including a total of 3,827,000 persons.

These statistics describe persons belonging to the household-dwelling population. Those living in institutions, homeless people and those living abroad or in dormitories do not belong to the household-dwelling population.

Number of first-time homebuyers 20,000 in 2014

In 2014, the household-dwelling population included 20,035 first-time buyers of dwellings in housing companies. The number of first-time homebuyers decreased by around 700 from 2013. The number of first-time homebuyers has fallen by 14,000 from 2006. In Greater Helsinki, that number remained nearly unchanged. In 2014, the number of first-time homebuyers in Greater Helsinki was 6,600, which was around 100 more than in 2013. The average age of a first-time homebuyer was 28.2 in 2014, having been 27.7 in 2006.

Here, a first-time homebuyer refers to a person who has bought a dwelling in a housing company and is exempt from the asset transfer tax as a first-time homebuyer. Those having bought their first home in a real estate property are not included in these figures. No information is available on first-time homebuyers before 2006.

1. Dwelling stock 2014

2.9 million dwellings

At the end of 2014, there were 2,918,000 dwellings in Finland, of which 300,000 were without permanent occupants. The dwelling stock went up by 12,000 dwellings from the previous year. From 1990, the building stock has increased by 708,000 dwellings, or by about 30,000 dwellings per year. Compared to 1990, 121,000 more dwellings were without permanent occupants. The growth in the building stock has been slowing down from the preceding decade. Most dwellings have been built in the 1970s- and 1980's. Residential building construction has centred in urban municipalities. In all, 76 per cent of the dwellings completed in the 1995 to 2014 period are located in urban areas.

45 per cent of all dwellings are in blocks of flats

As recently as 1990, the numbers of dwellings in detached houses and blocks of flats were still almost equal. At that time, dwellings in blocks of flats numbered 939,000 and those in detached houses only 4,000 fewer. The share of dwellings in blocks of flats grew over the 1990s, however. At the end of 2014, 45 per cent of all dwellings were in blocks of flats, i.e. 1,311,000 which is 160,000 more dwellings in blocks of flats than in detached houses. The number of terraced houses has grown over tenfold since 1970. In 1970 they numbered only 30,000 but the figure had gone up to 399,000 by the end of 2014.

Average floor area of dwellings 80 square metres

In 2014 the average floor area of a dwelling was 80.0 square metres. The average floor area of the dwelling stock has grown by about 20 square metres since 1970. The average floor area of a one-room unit was 34 square metres, that of a two-room unit 55 square metres, and that of a three-room unit and a kitchen 79 square metres. Despite the growth in the average size of dwellings, there were about 119,000 dwellings of under 30 square metres. In contrast, only 27 per cent of dwellings have a floor area of over 100 square metres. There are 426,000 one-room units with a kitchen or kitchenette, i.e. 15 per cent of the dwelling stock. The most common type of dwelling is a two-room unit. There are 872,000 two-room units with a kitchen or kitchenette, i.e. 30 per cent of the dwelling stock.

Table 1. Floor area per dwelling (m²) by type of building in 1970–2014

Year	Type of building				
	Total	Detached houses	Attached houses	Blocks of flats	Other buildings
1970	60,0	66,0	73,0	51,0	54,0
1980	69,3	83,6	71,7	54,8	55,5
1990	74,4	95,3	70,2	55,8	59,7
2000	76,5	101,9	70,0	56,1	59,8
2010	79,5	108,4	71,2	56,5	60,7
2014	80,0	110,8	71,3	56,4	60,7

The average floor area of an owner-occupied dwelling was 96 square metres and most of them are in detached houses. The average floor area of a rental dwelling was 53 square metres and most of them are in blocks of flats. In the dwelling stock statistics the tenure status is mainly defined for permanently occupied dwellings. The tenure status is also defined for a dwelling not permanently occupied when a dwelling is located in a rented dwelling subsidised by the state or a dwelling is temporarily occupied. Of all dwellings, the number of rented dwellings was around 905,000 at the end of 2014 and 824,000 of them were permanently occupied dwellings. The number of rented dwellings has grown by 359,000 since 1990.

58 per cent of new dwellings in blocks of flats were rented in 2014

According to Statistics Finland's data, around 17,000 new dwellings in blocks of flats were completed in 2014, of which 58 per cent were rented dwellings at the end of 2014. Nearly five per cent of new dwellings in blocks of flats were right-of-occupancy dwellings and the rest of the dwellings were owner-occupied dwellings (17%), unknown or still unoccupied (20%). The number of unoccupied dwellings is due to the fact that the tenure status of dwellings is mainly based on notices of removal and people move into newly completed dwellings in blocks of flats partly during the following year.

Figure 1. Flats completed in 2014 by tenure status at the end of the year, %

New blocks of flats completed in 2014 had over 10,000 rented dwellings. Around 2,600 of them were interest-subsidised rented dwellings supported by the state. Government-subsidised rented dwellings do not here include rented dwellings with short-term interest subsidy loans, or of the so-called interim model.

In 2014, a total of 29,000 dwellings were completed, of which 9,000 were in detached houses, 3,000 in terraced houses and 17,000 in blocks of flats. Approximately 8,000 new dwellings were completed in Greater Helsinki, 6,000 of them in blocks of flats. Fifty-nine per cent of new dwellings in blocks of flats were rented dwellings at the end of 2014.

2. Household-dwelling units and housing conditions 2014

Average size of a household-dwelling unit 2.04 persons

The number of household-dwelling units with one and two persons has been growing for several decades, being 75 per cent of all household-dwelling units at the end of 2014. At the end of 2014, the total number of household-dwelling units was 2,618,000, of which 1,098,000, i.e. 42 per cent, were single-person household-dwelling units. In 2014 the average size of a household dwelling unit was 2.04 persons, while in 1970 it was still three persons.

Figure 2. Number of household-dwelling units by size in 1970–2014, number

The size of a household-dwelling unit varied regionally. In urban municipalities the average size of a household-dwelling unit was 2.00 persons and in rural municipalities 2.14 persons. The structure of household-dwelling units differs between rural and urban areas. The share of one-person household-dwelling units is larger in urban areas (44%) than in rural areas (39%).

Around one half of Finns live in detached houses

Around one half of Finns live in detached houses, although only 40 per cent of permanently occupied dwellings are in detached houses. Terraced houses had 360,000 occupied dwellings, that is, 14 per cent of the dwelling stock. Of all occupied dwellings 44 per cent were in blocks of flats, although one third of the population live in blocks of flats. The explanation is that dwellings are smaller in blocks of flats, so smaller families or household-dwelling units live in them than in terraced or detached houses.

Table 2. Household-dwelling units and persons by type of building in 2014

Type of building	Household-dwelling units	%	Persons	%
Buildings total	2 617 780	100,0	5 351 173	100
Detached and semi-detached houses	1 050 423	40,1	2 690 569	50,3
Attached houses	359 896	13,7	707 976	13,2
Blocks of flats	1 160 447	44,3	1 871 918	35,0
Other buildings	47 014	1,8	80 710	1,5

One household-dwelling unit had around 82 square metres of living area at its disposal, or 40 square metres per person. The floor area per person diminishes considerably as the size of the household-dwelling unit grows. The average area available for a single person living alone was 60 square metres, a two-person

household-dwelling unit had 44 square metres per person but a household-dwelling unit of six persons had no more than 21 square metres of floor area per person.

Table 3. Floor area per person (m2) by size of household-dwelling unit in 1985–2014

Year	Number of persons							
	All household-dwelling units	1 person	2 persons	3 persons	4 persons	5 persons	6 persons	7+ persons
1985	28,9	48,6	34,3	27,6	24,1	21,2	18,7	15,2
1990	31,4	51,8	37,0	29,4	25,0	21,7	19,0	14,8
1995	33,4	54,0	39,2	30,4	25,3	21,9	19,0	15,0
2000	35,3	55,6	40,8	31,4	26,0	22,5	19,4	15,4
2005	37,5	57,0	42,4	32,3	27,3	23,7	20,4	16,3
2010	39,1	58,6	43,6	33,0	28,2	24,4	21,0	16,9
2014	39,9	59,6	44,2	33,4	28,3	24,6	21,1	16,8

One in four Finns lives in an overcrowded dwelling

At the end of 2014, the number of household-dwelling units living in overcrowded dwellings was 227,000 and the total number of persons living in such dwellings was 937,000. A household-dwelling unit is defined as living in an overcrowded dwelling if it consists of more than one person per one room of its dwelling, so a person living alone cannot be regarded as living in an overcrowded dwelling. One-person household-dwelling units excluded, 15 per cent of the rest of the household-dwelling units and almost one person in five lived in an overcrowded dwelling. The number of overcrowded household-dwelling units has decreased yearly but year 2013 the number of overcrowded household-dwelling units began to increase. In 2014 the number of overcrowded household-dwelling units has grown by around 1,000 and the number of persons living in overcrowded dwellings grown by around 4,500.

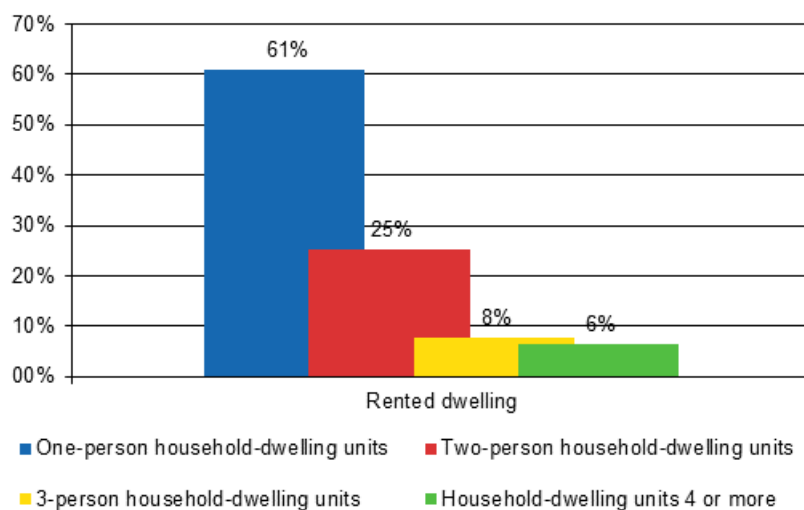

Owner-occupied dwellings have more living space than rented dwellings, when measured by floor area per person. The average floor area per persons of a household-dwelling unit living in an owner-occupied dwelling is 43 square metres, while a unit living in a rented dwelling has only 32 square metres of floor area per person.

Of rental dwellings, non-subsidised rented dwellings had the most floor area per person, 33 square metres. Differences to other rental dwellings were not large. In government-subsidised rented dwellings the floor area was 31 square metres per person. In right-of-occupancy dwellings the living space per person was 33 square metres.

Mainly household-dwelling units of one to two persons in rented dwellings

The majority of those living in rented dwellings, 86 per cent, were living alone or together with another person, while in owner-occupied dwellings the corresponding share was 70 per cent. Six per cent of the household-dwelling units living in rented dwellings and 18 per cent of those living in owner-occupied dwellings were larger household-dwelling units with at least four persons. At the end of 2014, the number of permanently occupied rented dwellings was around 824,000, of which 41 per cent were government-subsidised or interest-subsidised rented dwellings.

Figure 3. Rented dwellings by size of household-dwelling unit in 2014, (%)

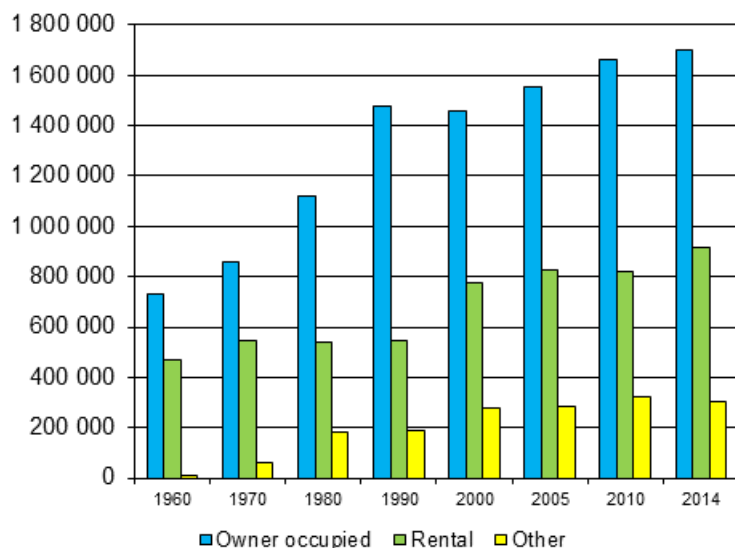

In all, 2,618,000 dwellings were permanently occupied at the end of 2014. Over one half of good one million permanently occupied dwellings in blocks of flats were rented dwellings. Around 116,000 dwellings were rented in terraced houses, being about one third of occupied dwellings in terraced houses. Detached and semi-detached houses had 33,000 rented dwellings.

One quarter of the population live in rented dwellings

The proportion of rented dwellings of all permanently occupied dwellings was 31 per cent, but 1.3 million, or one quarter of the population, lived in rented dwellings. The reason for this difference is that smaller household-dwelling units live in rented dwellings than in owner-occupied dwellings. At the end of 2014, the total number of permanently occupied rental dwellings was around 824,000, of which 41 per cent were government-subsidised or interest-subsidised rental dwellings. The share of government-subsidised or interest-subsidised rental dwellings of all permanently occupied rental dwellings decreased, as dwellings freed from restrictions. And that is part of the reason why other rental dwellings increased. At the end of 2014, there were 38,000 right-of-occupancy permanently occupied dwellings in Finland. Forty-four per cent of them are located in Greater Helsinki.

Figure 4. Dwellings by tenure status in 1960–2014

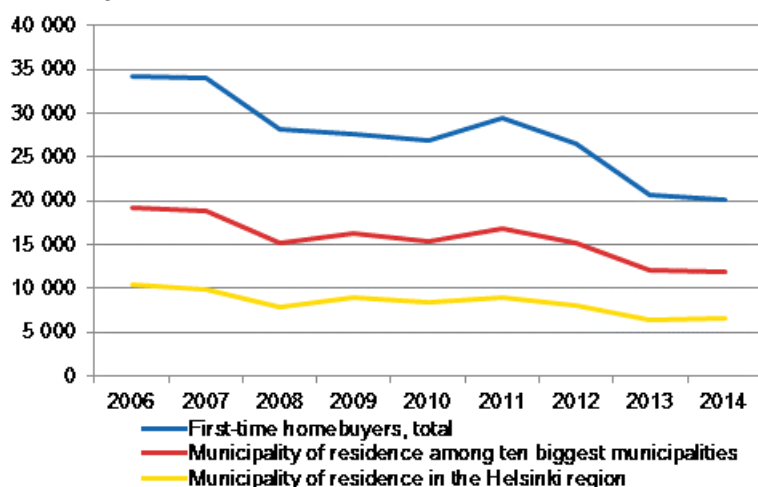

Renting is a tenure status preferred by young household-dwelling units in particular. As the age of the oldest person of a household-dwelling unit goes up the proportion of those living in rented dwellings goes down. In all, 75 per cent of the household-dwelling units with the oldest person aged under 30 and nearly one third of those with the oldest persons aged 30 to 44 lived in rented dwellings, while only 22 per cent of the household-dwelling units where the oldest person was aged over 45 did so. The household-dwelling units where the oldest person was aged 45 to 74 were the most likely to own their house. Forty-three per cent of the households-dwelling units meeting this age criterion were owner-occupiers of detached houses. In contrast, when the oldest person in the household-dwelling unit was older than this, owning a house was less likely. The most common mode of dwelling at a later stage in life was an owner-occupied flat in a housing company.

Number of first-time homebuyers 20,000 in 2014

According to Statistics Finland, the household-dwelling population included 20,000 first-time buyers of dwellings in housing companies. The number of first-time homebuyers has fallen by 14,000 persons (41 per cent) compared with 2006. Here, a first-time homebuyer refers to a person who has bought a dwelling in a housing company and is exempt from the asset transfer tax as a first-time homebuyer. Those having bought their first home in a real estate property are not included in the statistics.

First-time buyers of dwellings in housing companies are centred on towns. Most first-time homebuyers (60 per cent) were living in the ten biggest towns of Finland in the year of purchase. 19 per cent of first-time homebuyers were living in Helsinki.

Figure 5. First-time homebuyers by municipality of residence in 2006 to 2014, persons

In 2014, the average age of first-time buyers of a dwelling in a housing company was 28. Of first-time homebuyers, 16,000 were living in the purchased dwelling at the end of the year. These persons were divided into 13,000 household-dwelling units, 5,100 of which were one-person household-dwelling units.

Persons aged 18 to 39 who do not already own a dwelling and who buy the dwelling for their own use are exempt from the asset transfer tax. First-time homebuyers have to move in within six months from the time of purchase, for which reason all first-time homebuyers are not living in the dwelling they own in the statistical reference period. Those registered as permanently resident at institutions, dormitories and abroad, as well as homeless people do not belong to the household-dwelling population. Helsinki region includes four towns: Helsinki, Espoo, Kauniainen and Vantaa.

The number of blocks of flats with no lift relatively high

The number of blocks of flats with more than three storeys was around 24,000, of which 3,200 had no lift. Dwellings in blocks of flats with more than three storeys and no lift numbered 103,000 and had 141,000

occupants, of whom 24,000 were aged over 65. It was even less usual to have a lift in a three-storey building. Fifteen per cent of the 349,000 dwellings in buildings with three storeys were in blocks of flats with a lift. In all, 421,000 Finns, of whom 79,000 were aged over 65, lived in three-storey buildings with no lift.
