

New orders in manufacturing

2016, August

New orders in manufacturing fell by 12.6 per cent year-on-year in August

According to Statistics Finland, the value of new orders in manufacturing was 12.6 per cent lower in August 2016 than twelve months earlier. Orders have declined continuously for one year. During January to August, orders went down by 11.6 per cent from the year before.

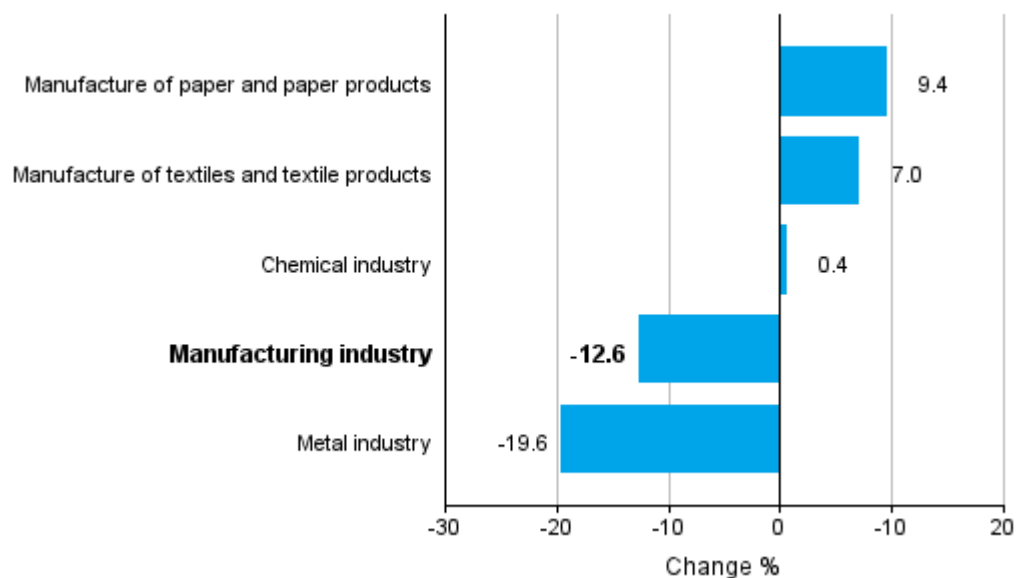

Annual change in new orders in manufacturing (original series), % (TOL2008)

Enterprises received more orders than twelve months ago in August in the paper, the textile and the chemical industry. In the industry of the manufacture of paper and paper board products, orders increased by 9.4 per cent, in the textile industry by 7.0 per cent and in the chemical industry by 0.4 per cent year-on-year. In the metal industry, orders declined by 19.6 per cent from one year ago. The fall in orders in the metal industry is largely explained by the exceptionally high value of new orders in the corresponding time period of the previous year, generated by, for example, an order in the shipbuilding industry.

When interpreting these statistics, it should be borne in mind that they typically show strong fluctuations by month. Even new orders of substantial value are not examined over extended time periods but for the statistical reference month only.

Change in new orders in manufacturing 8/2015– 8/2016 (TOL2008)

The index of new orders in manufacturing describes development in the value of new orders received by enterprises for commodities and services that are meant to be produced by establishments located in Finland. These statistics are based on non-probability sampling, in which the basic observation unit is an enterprise or a kind-of-activity unit. The sample comprises monthly 400 to 450 enterprises or their kind-of-activity units. Index point figures and annual change percentages are published monthly for five industry categories. The time series start from January 2005 and their base year is 2010 (2010=100). The index figures may become slightly revised as new data accumulate and enterprises report changes to their data. Due to supplementations, the latest 12 months are revised in the releases. A detailed description of the statistics and the calculation method are included in the quality description on the home page of the statistics.
